

a Known chemistry is an inductive bias, not an inventory

b Chemistry enters the learned flow, not only its output

c Exact component projection, verified rather than predicted

$D_R(G, c)$ partitions the terminal state in one linear pass; admission requires $\mathcal{R}(D_R(G, c)) \cong G$

generated lipid G (P01)

amine head

aldehyde tail

isocyanide tail

d A route back to purchasable starting materials, earned not assumed
